Call for Papers
Journal of Software: Evolution and Process
Special issue on High Assurance Systems Engineering

The special issue is open to extended versions of full research papers presented at the 17th IEEE International Symposium on High Assurance Systems Engineering (HASE 2016). The conference is a forum on tools and techniques used to design and construct systems that, in addition to meeting their functional objectives, are safe, secure, and reliable. The 2016 issue featured sessions on the following topics.

- **Platforms and Architectures**: networked systems, cloud services, smart grid, cyber-physical systems.
- **System Behavior**: cybersecurity, safety, adaptation, resilience and survivability.
- **Development and Understanding**: formal development, analysis of design models, software analysis, testing and quality assurance.

Authors are invited to submit extended versions of their papers, having at least 30% new content. The submissions should be done via the journal web site at: [https://mc.manuscriptcentral.com/jsme](https://mc.manuscriptcentral.com/jsme). During submission the authors will have to select the HASE special issue from a drop down list.

**Important Dates:**

Submission: April 15, 2016  
First round notification: July 1, 2016  
Revised submission: September 1, 2016  
Final notification: November 1, 2016  
Camera ready: December 15, 2016
